

1999

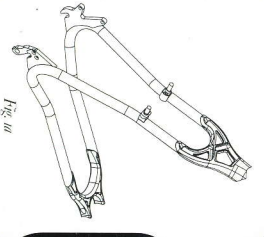

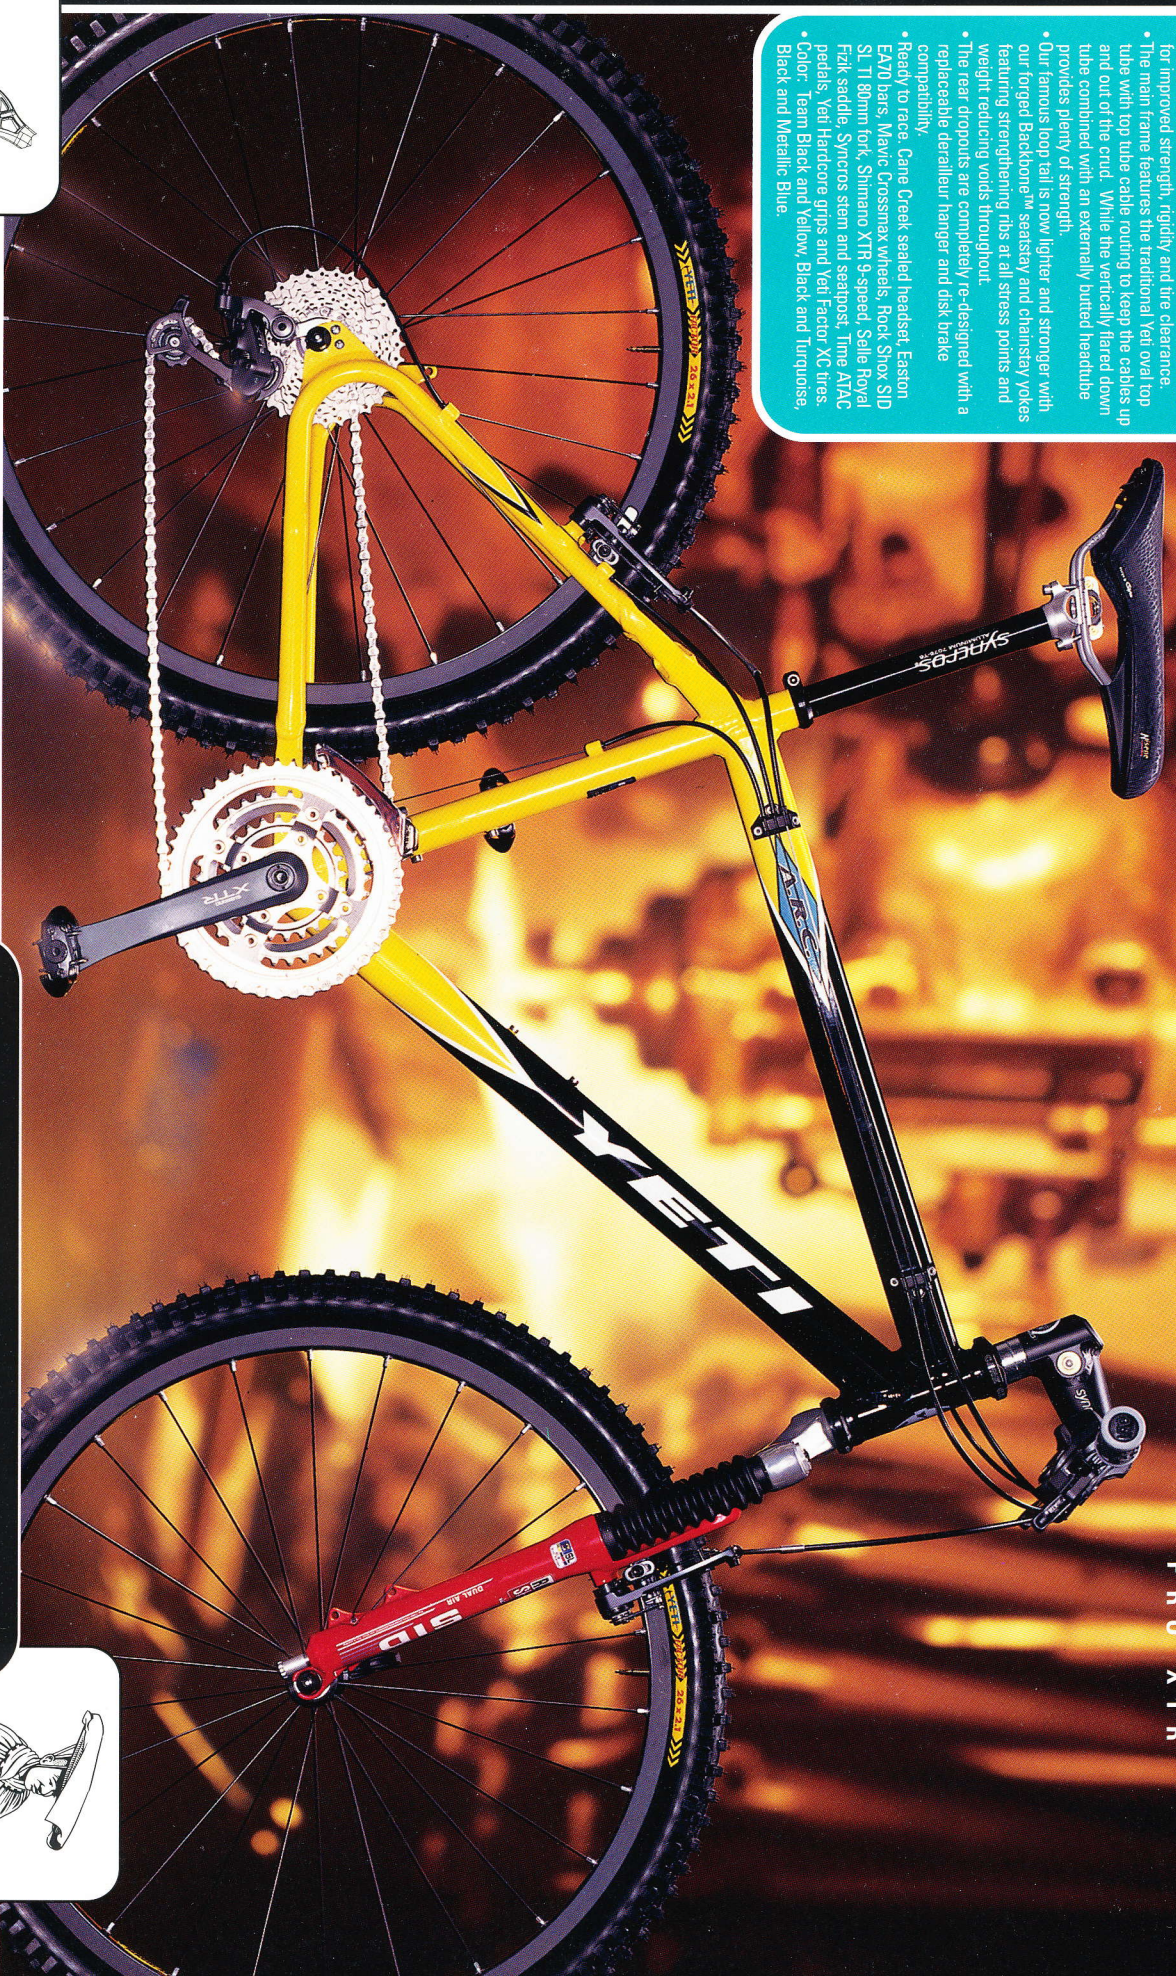

Commitment. Not a very appealing idea in a society driven by convenience. But while most people are happy with a medium two-ingredient pizza in 30 minutes or less, there are others who want more out of life. People in every corner of the world who want something no pizza guy can deliver. Hindu devotees in Malaysia that achieve religious rapture during a painful journey to the sacred Batu Caves. Asmat tribesmen in New Guinea who pay homage to the moon by fitting 12-inch shells through their septum. Suburbanites in Denver who seek fulfillment in the midst of exhaustion during the Leadville 100 mountain bike race. Maybe you're one of these people. If so, we build bicycles for you. Bikes that fit. Bikes that last. Bikes that perform. For the past fourteen years Vefi craftsmen have used the finest materials available and the most effective race-proven designs to create bicycles for the most committed rider. Like our Lawwill DH-8, the fastest downhill bike ever built, our cross-country specific A.S.-5, a fully active feather that quickly converts rolling singletrack into distant memory, the all new A.R.C., arguably the finest handtail on the planet, or our Road Project, a sub-18 pound missile locked onto the nearest USCF finish line. Custom aluminum machines that will take you as far as you're willing to go. For most, that's not much farther than the couch. For you, it could be anywhere.

YETI

ARC

PRO XTR

- ALL NEW Yeti ARC frame uses Custom Easton 7005 aluminum with forged seatstay and chainstay yokes for improved strength, rigidity and tire clearance.
- The main frame features the traditional Yeti oval top tube with top tube cable routing to keep the cables up and out of the crud. While the vertically flared down tube combined with an externally butted headtube provides plenty of strength.
- Our famous loop tail is now lighter and stronger with our forged Backbone™ seatstay and chainstay yokes featuring strengthening ribs at all stress points and weight reducing voids throughout.
- The rear dropouts are completely re-designed with a replaceable derailleur hanger and disk brake compatibility.
- Ready to race: Carve Creek sealed headset, Easton EAYD bars, Mavic Crossmax wheels, Rock Shox SID SL T1 80mm fork, Shimano XTR 9-speed, Selle Royal Fizk saddle, Syncros stem and seatpost, Time ATAC pedals, Yeti Hardcore grips and Yeti Factor XC tires.
- Color: Team Black and Yellow, Black and Turquoise, Black and Metallic Blue.

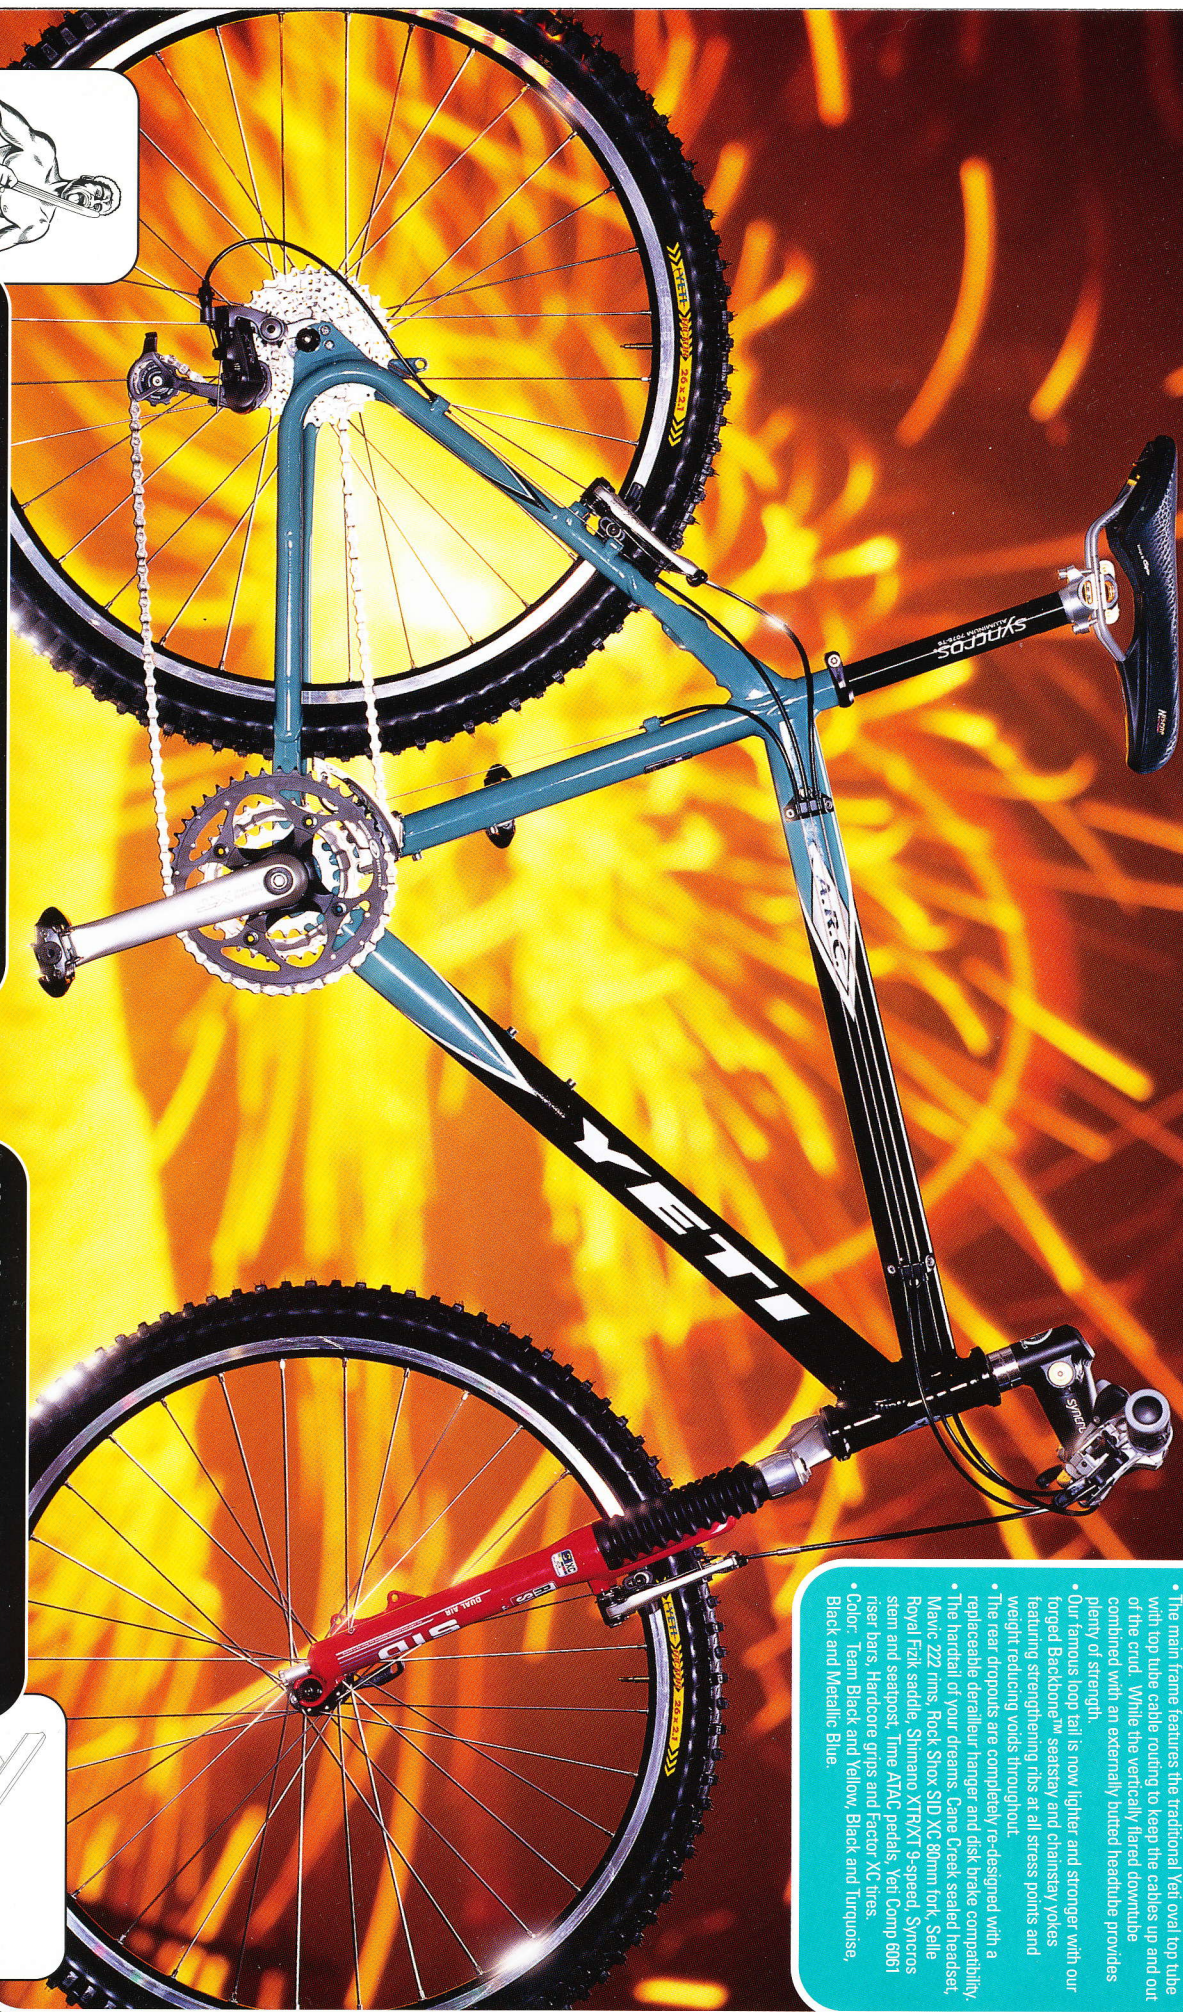

Yeti's all new handroll frame relies on the incredible strength of our forged Backbone™ seatstay and chainstay yokes to carry you through any challenge, from the rigors of the NORBA circuit to the unforgiving conditions of the Colorado backcountry.

The monks of Japan's Mount Hiei rely on the strength of their faith to carry them through the Sennichi Kaihogyo, a grueling physical and mental challenge which includes a 7 1/2 day stretch without food, water, rest or sleep, and a 100-day period of running 52 miles per day.

YETI A.R.C.

RACE XT

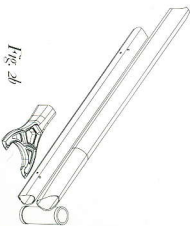

- All NEW Yeti A.R.C. frame uses Custom Easton 7005 aluminum with forged seatstay and chainstay yokes for improved strength, rigidity and tire clearance.
- The main frame features the traditional Yeti oval top tube with top tube cable routing to keep the cables up and out of the crad. While the vertically flared downtube combined with an externally butted headtube provides plenty of strength.
- Our famous loop tail is now lighter and stronger with our forged Babkone™ seatstay and chainstay yokes featuring strengthening ribs at all stress points and weight reducing voids throughout.
- The rear dropouts are completely re-designed with a replaceable derailleur hanger and disk brake compatibility.
- The handrail of your dreams. Cane Creek sealed headset, Mavic 222 rims, Rock Shox SID XC 80mm fork, Selle Royal Frizk saddle, Shimano XT/XTX 9-speed, Syncros stem and seatpost, Time ATAL pedals, Yeti Comp 6061 riser bars, Hardcore grips and Factor XC tires.
- Color: Team Black and Yellow, Black and Turquoise, Black and Metallic Blue.

On the coast of Chama, traditional Ewe people heat hand-wrought knives in fire and then apply them to the tongue during intense voodoo ceremonies. They are protected from harm by the healing god, Ehimani Koku, whom they invoke with song, dance and blood offerings.

Not unlike the tongue of a Ewe worshipper, Yeti's custom-drawn 7005 Easton Elite tubing is thoroughly heat-treated, giving it uniform strength and protecting it from the evils of molecular imperfection.

YETI A.R.C. COMP L/X T

- All NEW Yeti A.R.C. frame uses Custom Easton 7005 aluminum with forged seatstay and chainstay yokes for improved strength, rigidity and tire clearance.
- The main frame features the traditional Yeti oval top tube with top tube cable routing to keep the cables up and out of the crud. While the vertically flared downtube combined with an externally butted head tube provides plenty of strength.
- Our famous loop tail is now lighter and stronger with our forged Backbone™ seatstay and chainstay yokes. Featuring strengthening ribs at all stress points and weight reducing voids throughout.
- The rear dropouts are completely re-designed with a replaceable derailleur hanger and disk brake compatibility.
- Our best frame with affordable parts: Cane Creek sealed headset, Easton EA70 bars, Mavic 222 rims, Rock Shox Judy SL 80mm fork, Selle Royal Fatik saddle, Shimano XT/LX 9-speed, Syncros stem and seatpost, Time ATAC pedals, Yeti Hardcore grips and Factor XC tires.
- Color: Team Black and Yellow, Black and Turquoise, Black and Metallic Blue.

Fig. 6a

The Maori, indigenous people of New Zealand, once tattooed elaborate swirls on their faces to strike fear into the hearts of their enemies and ensure that they always looked fierce in battle. The practice was reserved for warriors of the royal class.

The perfect swirls (read: beads) of Yeti's TIG welding, ridden into countless conflicts by warriors at the professional and privateer level, serve notice that your bike is always ready for battle. Craftsmanship in a class by itself.

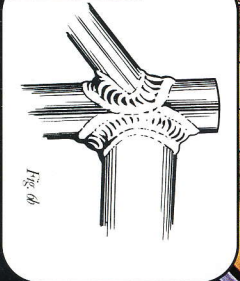

Fig. 6b

The Asmat people of New Guinea place Bi Pane' (8-12" nose ornaments made of shell) through a large hole in the septum, believed to symbolize the moon, the wild boar (which holds a place of high esteem in Asmat culture), and the human skulls which the warriors once collected.

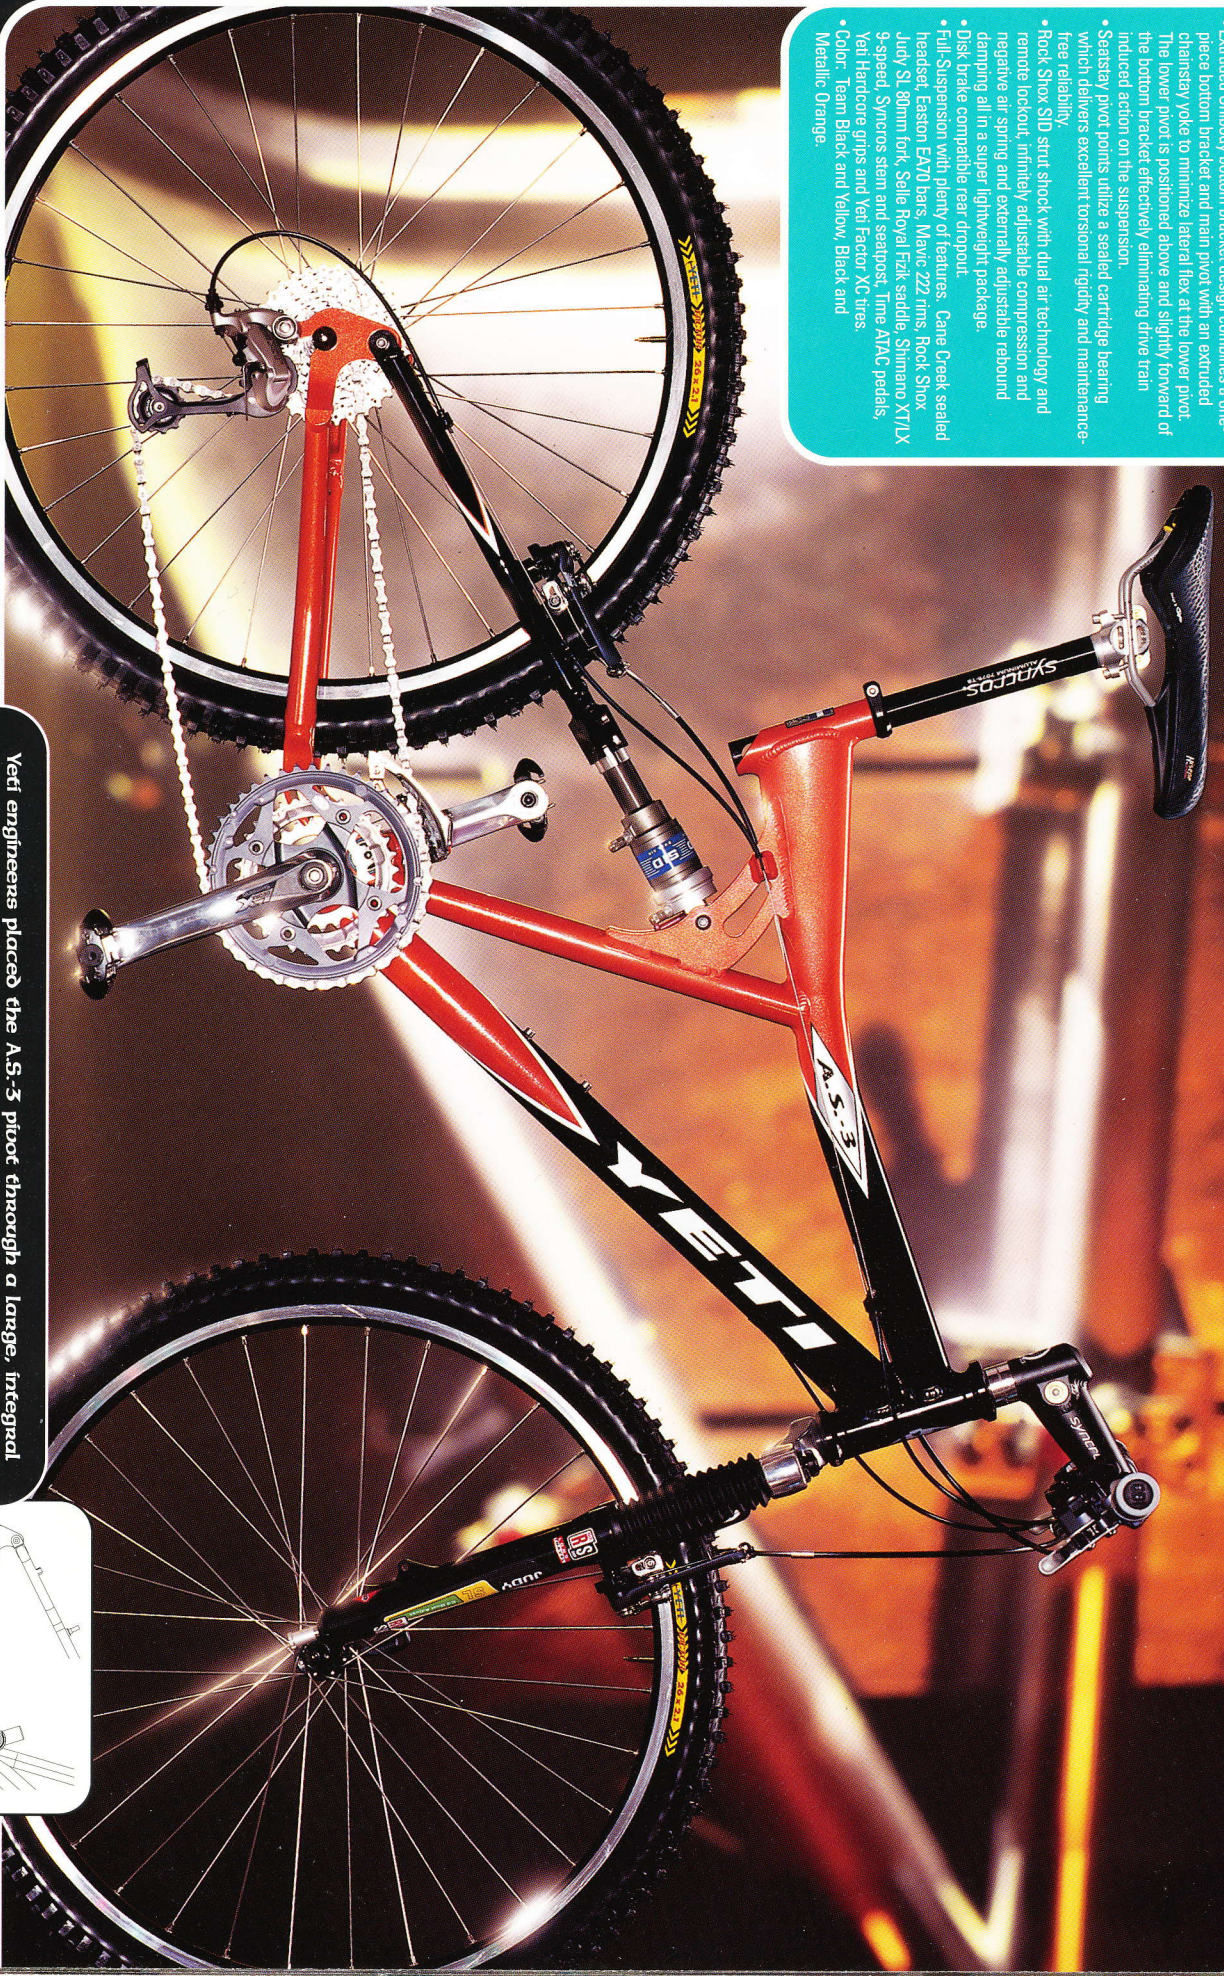

- Re-designed for 1999, fully-active, full-suspension design. Custom Easton 7005 aluminum main frame with 6061 aluminum chainstay and seatstay assemblies.
- Extruded Unibody bottom bracket design combines a one-piece bottom bracket and main pivot with an extruded chainstay yoke to minimize lateral flex at the lower pivot. The lower pivot is positioned above and slightly forward of the bottom bracket effectively eliminating drive train induced action on the suspension.
- Seatstay pivot points utilize a sealed cartridge bearing which delivers excellent torsional rigidity and maintenance-free reliability.
- Rock Shox SID strut shock with dual air technology and remote lockout, infinitely adjustable compression and negative air spring and externally adjustable rebound damping all in a super lightweight package.
- Rear dropout is disk brake compatible.
- Out-of-the-box performance. Cane Creek sealed headset, Mavic 222 rims, Rock Shox SID XC 80mm fork, Selle Royal Fizik saddle, Shimano XTR/XT 9-speed, Syncros stem and seatpost, Ime ATAC pedals, Yeti Comp 6061 riser bars, Yeti Hardcore grips and Yeti Factor XC tires.
- Color: Team Black and Yellow, Black and Metallic Orange.

YETI

RACE XT

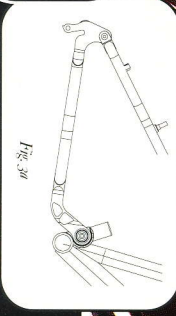

YETI A-S-3

COMP L/X T

- Re-designed for 1999, fully-active, full-suspension design. Custom Easton 7005 aluminum main frame with 6061 aluminum chainstay and seatstay assemblies.
- Extruded Unibody bottom bracket design combines a one-piece bottom bracket and main pivot with an extruded chainstay yoke to minimize lateral flex at the lower pivot. The lower pivot is positioned above and slightly forward of the bottom bracket effectively eliminating drive train induced action on the suspension.
- Seatstay pivot points utilize a sealed cartridge bearing which delivers excellent torsional rigidity and maintenance-free reliability.
- Rock Shox SID strut shock with dual air technology and remote lockout, infinitely adjustable compression and negative air spring and externally adjustable rebound damping all in a super lightweight package.
- Disk brake compatible rear dropout.
- Full suspension with plenty of features. Carve Creek sealed headset, Easton EA70 bars, Mavic 222 rims, Rock Shox Judy SL 80mm fork, Selle Royal Fizk saddle, Shimano XT/LX 9-speed, Syncros stem and seatpost, Time ATAC pedals, Yeti Hardcore grips and Yeti Factor XC tires.
- Color: Team Black and Yellow, Black and Metallic Orange.

Yeti engineers placed the A-S-3 pivot through a large, integral hole in the bike's new extruded Unibody bottom bracket, rendering this critical area of the bike completely immune to frame flex, drive-train induced pogo, and random boar attacks.

YETI road project

- Custom Easton Elite 7005 Aluminum combined with race-proven geometry wrapped-up in a 2.5 pound package.
- Internally and externally-tapered seatstays for improved shock absorption and comfort.
- Oversized, tapered chainstays for sprint-winning torsional rigidity and low-profile crank clearance.
- Traditional size-specific geometry for a perfect fit and predictable handling.
- Our best kept secret. Came Creek sealed headset. Continental Grand Prix 3000 tires. Mavic Classics Pro wheels. Shimano Dura-Ace Ultegra 9-speed. Syncros seatpost. TTT bars and stem. Time Club carbon fork.
- Color: Team Black and Yellow.

Fig. 74

In Burma, Paduang women place one brass or copper ring around the neck each year until the height reaches 10 inches or more. The neck is not actually elongated, but the shoulders and ribs are pushed down by the stack, which can weigh 20-pounds or more.

Much preferable to 20 pounds of copper is the 2.5 pound aluminum Yeti Road Project frame, a classically-configured Easton Elite masterpiece that will put you head and shoulders above the competition.
